Quayle Action

1. This application is in condition for allowance except for the following formal matters:

Drawings

- a. Figures 3 & 4 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

- b. The disclosure is objected to because of the following informalities: (a) insertion of continuing information regarding the parent case must be provided on the first page of the specification. Appropriate correction is required.

Claim Objections

c. Claims 1-9 are objected to because of the following informalities: (a) in the preamble, the word "recording" should be omitted or replaced with "reading" since a spin valve type head is only utilized for reading, not recording. Appropriate correction is required.

2. Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance. The prior art of record does not teach nor reasonably suggest a spin valve head including the combination of at least a layer of NiCr (between 10 and 100 Angstroms thick) provided on the sidewalls and an antiferromagnetic layer; a hard bias seed layer provided on the NiCr layer; a longitudinal hard bias layer on the seed layer; and a conductive lead layer on the hard bias layer.

The closest prior art, e.g., US Patent/Publication(s) to Horng et al. (6,632,474) and Chien et al (2002/0181171), each show a multi-layer structure for the lead layer and longitudinal bias including a NiCr layer, however, the configuration(s) are not in the claimed layer sequence and/or do not include the additional layer below the hard bias layer as claimed, which sequence

Art Unit: 2652

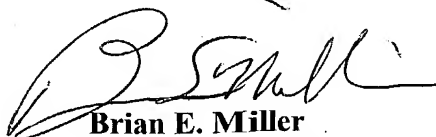

is believed to be important to the instant application. Changing the sequence of the prior art is also not believed to be obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
